

GM52 – Multi Scale Track Tester

The Track Tester works on OO, HO and N gauge track and enables you to quickly test track for DCC or DC power and also help locate faults at track joints and points etc.

To use simply place it across your track and the multicolour LED will either display Orange for DCC power, or Red or Green for DC power, the colour indicating the + or - polarity (train direction) of the rails is shown on the product.

Note that if your track is dirty the Track Tester may not make proper connection or work properly, just like your trains!

Caution

Make sure you always put the Track Tester in line with the rails as shown because if twisted you could bypass a component and damage the LED. This product is not a toy and contains small parts which may choke or harm a child.

Powered by Train-Tech technology

The Train-Tech range of products that include Digital Signals, Point Controllers,

Lighting Effects and Signal Kits is distributed to the trade by

GAUGEMASTER
